5	No. 140 "Y" Level ..	Specification on page 80	1
6	Bridges Lees' Photo Theodolite.	Specification attached	1

No. S. P. C., dated 26th January 1931.

SPECIFICATION FOR BRIDGES LEES' PHOTO THEODOLITE.

The Bridges—Lee Teodolite.—consists of a photographic camera made of aluminium and mounted on a divided horizontal circle that can be levelled and clamped as an ordinary theodolite. Inside the Camera is a magnetic compass having a transparent cylindrical circle of degrees which can be brought against the sensitive plate when the dark slide is in position. The compass in operation turns to the magnetic bearing, and as the light passing through the lens also passes through the compass ring the degrees are photographed on the negative at the same time as the view. In addition to this, horizontal and vertical wires are so placed that they are reproduced on the negative as lines, and a transparent scale, which is also photographed on the negative, shows actual proportions of the projected objects and ensures accurate measurements. A faithful record of the necessary data is thus obtained on the photograph itself, and a note book is unnecessary. This means a saving of time and reduction of risks of error.

The photographic system of surveying, especially in hilly countries, has been proved to be cheaper and quicker than any other method.

The instrument is finished in best style, and beside the firm open frame tripod and usual adjustments and spirit levels, has a telescope fixed to the top of the camera, with vertical arc and a reading microscope. The horizontal circle reads by vernier to minutes of arc. A photographic rectilinear lens and iris diaphragm and six double dark slides for 5 by 4 sensitive plates are included, complete with Mahogany case.

Yours faithfully,
M. S. RAMCHENDRA RAO,
Secretary, Stores Purchase Committee

Notice No. S. P. C. 12503-52, *dated 30th January* 1931.

PUMPING SETS REQUIRED FOR IRRIGATION WATER SUPPLY, ETC.

This Office enquiry No. 12211-60, *dated 23rd January* 1931.

Please note that all the pump reuired in the above enquiry are direct coupled motor driven centrifugal pumping sets. As reards efficiencies your may make your own proposals consistently with the duty required of the pumps specified under each item
